DETAILED ACTION

Response to Amendment

1. Applicant's amendments and accompanying remarks filed 5/5/03 have been entered and carefully considered. Applicant's amendments are found to overcome the claim objections and 112 indefinite rejection of claim 22. Despite this advance, the amendments are not found to patently distinguish the claims over the prior art and Applicant's arguments are not found persuasive of patentability for reasons set forth herein below. The notice of allowable subject matter is withdrawn in place of a 112, 1st paragraph rejection that should have been made in the previous rejection.

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 3. Claims 21-31 and 36-37 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the creation of a fiber, does not reasonably provide enablement for the same composition to be used as an adhesive or component other than a fiber. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make the invention commensurate in scope with these claims. The claims are broad enough to encompass utilizing the composition of the invention as an adhesive or other component; however, the specification only teaches utilizing the composition as a fiber.

Art Unit: 1771

Claim Rejections - 35 USC § 102

4. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

5. Claims 21-22, 24-28, 30, and 37 are rejected under 35 U.S.C. 102(b) as being anticipated by Brady et al (5217798), as set forth in the previous action.

Applicant argues that Brady does not anticipate the instant invention because Brady's polyethylene oxide is used as an adhesive. This argument is not commensurate in scope with the claims because the claims recite a nonwoven material comprising the polyethylene oxide material. They do not require that the fibers of the nonwoven be formed from polyethylene oxide, only that the polyethylene oxide be capable of being formed into a fiber. The polyethylene oxide of Brady has the capability to be spun into fibers.

Applicant argues that Brady's monomer is not polar; however, Brady's monomer is, in fact, polar (col. 3, line 39).

Claim Rejections - 35 USC § 103

6. Claims 23 and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brady et al (5217798), as set forth in the previous action.

Applicant argues that "since Brady is silent as to shear rate...any teachings of viscosity are not adequately described and enabled. This argument is not germane to the instant rejection because the rejection is not dependant on Brady's viscotity teachings. It would have been obvious to alter shear rate in order to optimize the strength of Brady's material.

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher Pratt whose telephone number is 703-305-6559. The examiner can normally be reached on Monday - Friday from 7 am to 4 pm.

If attempts to reach the examiner are unsuccessful, the examiner's supervisor, Terrel Morris can be reached on 703-308-2414. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9310 for regular communications and 703-872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0661.

Christopher C. Pratt July 14, 2003
